

ix POSTMIX for cold drinks systems

ix POSTMIX water filters offer excellent filtration to ensure great tasting still or carbonated cold drinks through dispensers or bar guns. The large capacity of ix POSTMIX means water treatment costs are kept down whilst Insert Refill Technology means you can benefit from even further savings by replacing the media insert rather than the entire filter.

Highly profitable and high in water content (over 80% water), the quality of water used for cold beverage dispense machines is vitally important. Fast moving restaurants and stores depend on high quality water to provide an uninterrupted and smooth operation. Also, in order to achieve high levels of customer satisfaction and retention, the quality of water needs to be of the highest standard.

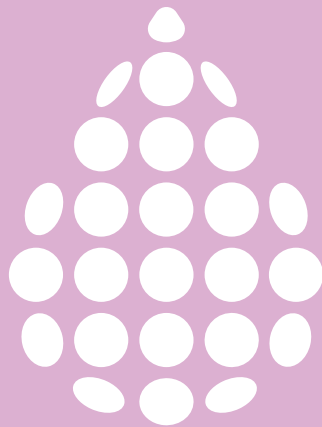

IX POSTMIX	
FLOW RATE	7
PRESSURE	2-6 BAR
