

iX VEND

iXWATER™
ECO-FRIENDLY WATER FILTER

Quick replace cartridge or to be totally cost-effective and green - replace insert only

Water filter for vending machines

The iXVEND has a 5-stage filtration process designed to provide high quality water, improving taste, colour and odour whilst inhibiting scale for high volume hot beverage and vending applications.

The filter reduces sediment and chlorine whilst protecting against bacteria and water borne cysts.

iX VEND's in-built scale inhibition dramatically reduces scale build up and saves energy.

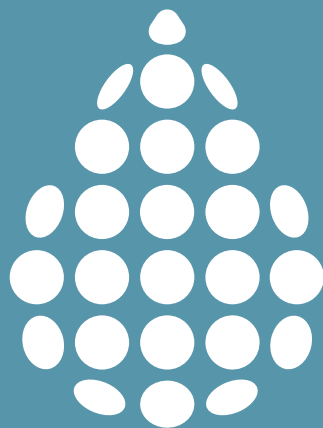

The simple installation and quick replacement makes the iX VEND the ideal choice for caterers and vending operators requiring high volume, safe water treatment whilst making considerable cost savings.
